# PROTOCOL of CONVERTIBLE CAMERA and PAN/TILT SYSTEM Ver2.44 (19/01,2015)

AW-HE130/AW-HE60/AW-HE120/AW-HE50 AW-HE40/AW-HE65/AW-HE70

Panasonic Corporation

Specifications are subject to change without notice.

## Camera Control Protocol

This is a program to control Panasonic Convertible Camera system from PC by serial communication.

Method	Half Duplex
Commnunication Speed	9600bps
Data bit	8bit
Stop bit	1bit
Prity	None
Flow contorol	None

(Electrical Specification)

Compatible with RS422

2line system(TXD/send, RXD/Recieve)

#### (Process)

- (1) PC Command → CAMERA
- (2) CAMERA ACK(H'06) → PC
- (3) CAMERA Processes "Command"
- (4) CAMERA Command' → PC

Normally it is processed as mentioned above, but in case of error, it ends by replying error code(\*1) in (4). Command and Command' are not always the same.

Camera does not accept a command unless command process finishes and returns the return code

### (\*1)Error code

Item	Error code	Contents
Unsupported	[STX]ER1[ETX]	The Command is not supported by CAMERA.
System busy	[STX]ER2[ETX]	CAMERA can not process the command for running the other processing.
Out of range	[STX]ER3[ETX]	Data is out of range.

<Basic pattern of Command>

Header is [STX] (H'02) and Delimiter for [ETX] (H'03), and Command of ASCII and / or Data can be inserted in between. Division of Command and Data is ": (H'3A)".

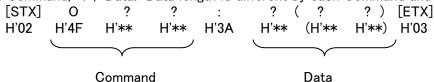

There are 2 kinds of Commands , one is for letters and the other for numbers. In total , there are 37 kinds of ASCII code code O(H'30) to O(H'30), O

(1)Pattern 1 (For the Camera Operation ) There is no Data, only Command.

[STX] O ? S [ETX] H'02 H'4F H'\*\* H'53 H'03

(2)Pattern 2 (Camera mode setting)

In order of Command, ":", Data. Data length id different by each Command and maximum 3 letters.

Caution: Data length is fixed for each Command and not able to decrease.

(3)Pattern 3 (Selection of Scene) In order of Command, ":", Data. Data length=1 Byte

[STX] X S F : ? [ETX] H'02 H'58 H'53 H'46 H'3A H'\*\* H'03

(4)Pattern 4 (Monitoring) In order of Command, ":", Data. Data length=1 Byte

[STX] D ? ? : ? [ETX] H'02 H'44 H'\*\* H'\*\* H'3A H'\*\* H'03

(5)Pattern 5 (Other Menus)

In order of Command, ":", Number Command(2 Bytes), ":", Data. Data length=2 Bytes.

[STX] O S D : ? ? : ? [ETX]

H'02 H'4F H'53 H'44 H'3A H'\*\* H'\*\* H'3A H'\*\* H'\*\* H'03

In this pattern, numbers at rear part of command (6th and 7th letters) are the command and Data follows by 2bytes (9th and 10th letters)

(6)Pattern 6 (Questions to Camera)

There is only Command, not Data

[STX] Q ? ? [ETX]

H'02 H'51 H'\*\* H'\*\* H'03

This Command requires the programmed number of the Camera and Camera returns adding Data.

Data is 2 Bytes but there are same exceptions. It is specified as Q(H'51) -> O(H'4F).

(7)Pattern 7 (Questions to Camera 2)

In order of Command, ":", number of Command. No Data. Command from Camera is with Data.

[STX] Q S D : ? ? [ETX] H'02 H'51 H'53 H'44 H'3A H'\*\* H'\*\* H'03

This Command also requires the programmed number of the Camera and the Command is converted into numbers. It can be programmed only by Camera User Mode and is Data length, which Camera returns is 2 Bytes. (There are same exceptions.) It is  $Q(H'51) \rightarrow O(H'4F)$  same as (7). When Camera receives unprocessable number Command, it returns as Data = number Command.

a) PC -> CAMERA

[STX] Q S D : 1 4 [ETX] H'02 H'51 H'53 H'44 H'3A H'31 H'34 H'03

b) CAMERA -> PC

[STX] O S D : 1 4 : 1 4 [ETX] H'02 H'4F H'53 H'44 H'3A H'31 H'34 H'3A H'31 H'34 H'03

(8)Pattern 8 (Related to Contact Closer P/T)

There is only Command, not Data

[STX] H ? ? [ETX]

H'02 H'48 H'\*\* H'\*\* H'03

Command for Lens I/F Card (AW-PB308) and control of lens for AW-E655. Camera repeats the same Command.

# P/T Control Protocol

This is a program to control Panasonic PAN/TILT system from PC by serial communication.

Method	Half Duplex
Commnunication Speed	9600bps
Data bit	8bit
Stop bit	1bit
Prity	None
Flow contorol	None

(Electrical Specification)

Connecter: Mojdular 8pin Compatible with RS422

4line system(TX+,TX-/send, RX+,RX-/Recieve)

(Process)

(1) PC — Command → CAMERA

(2) CAMERA — Command → PC (In most P/T commands, there is no reply.)

Normally it is processed as mentioned above, but in case of error, it ends by replying error code(\*1) in (2).

(\*1)Error code

Item	Error code	Contents
Unsupported	eR1[CR]	The Command is not supported by CAMERA.
System busy	eR2[CR]	CAMERA can not process the command for running the other processing.
Out of range	eR3[CR]	Data is out of range.

ex)1 PAN Stop command
